Logging Trails

A perennial blend of longer lasting and more palatable forages than the typical loggers blend. Most people aren't as familiar with the long-lasting meadow fescue, but it is shade tolerant and will thrive for many years. Meadow fescue looks more like ryegrass and it is a staple in the grain industry. This blend is rough and tuff, but also gives you added nutrition with the inclusion of the four clovers. There are no annuals in this blend, it is a premium perennial logging blend that does more than cover ground. Deer will love it.

Planting Date: May 15 - June 30, August 1 - September 15

Planting Depth: 1/8" - 1/4"

Seeding Rate: 8 - 10 lbs. per acre

Maturity: 60 days
