

Grandpa Ray Outdoors

Four Galore

Conventional Soybeans	30%
Lablab	20%
Forage Soybeans	30%
Cow Peas	20%

This annual blend of soybeans and peas is fast growing and very drought tolerant. It handles a variety of soil conditions, including a slightly lower pH than regular soybeans. The lablab in this blend is highly palatable and fast growing. The lablab and cow peas do not require a lot of water and can handle dry and sandy soils as well. The forage soybeans in this blend can set pods, but requires early planting and ideal weather. They are a tall and fast growing, intermediate soybean. The conventional soybean in this blend are slower growing and will also set pods.

Note: This is a non-roundup blend. You need to use a grass killer like Clethodim, Arrow Select or Volunteer to kill grasses in the plot. For broadleaves, you can use Pursuit or Thunder to kill any that arise. Consult your local agronomist for use rates and herbicide information.

****Soil temperature needs to be 65 degrees****

Planting Date: May 15 - June 30
Planting Depth: 1/2" - 1"
Seeding Rate: 50 lbs. per acre
Maturity: 60 - 90 days
